

RecallScope

Pharmaceutical distribution

Know where every affected batch went.
Account for what comes back.

The recall evidence gap

A recall must connect the right medicine and batch to every recorded destination and return.

Goods received

PAR-500-100
PCR-260901
1,000 boxes

Dispatch records

Same product and batch
4 recipient sites
600 boxes delivered

Returns

Original dispatch reference
Quantity received back
Quarantine location

Every return must match the correct product, batch and dispatch.

Authored pharmaceutical example

A distributor's working record

Product identity stays attached to the batch, location and destination.

Distribution

Overview

Products & batches

Stock

Deliveries

Recalls

Reports

Products & batches

Product identity includes strength, presentation and batch.

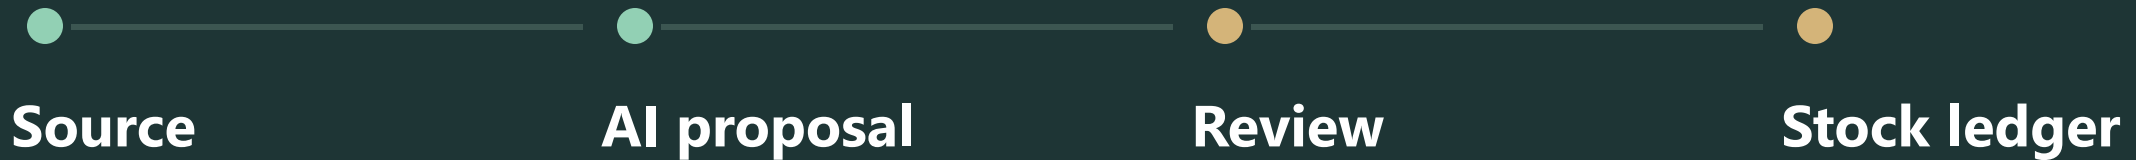

Product	Batch	Received
Paracetamol 500 mg	PCR-260901	1,000 boxes
Amoxicillin 500 mg	PCR-260901	300 boxes

Same printed code. Separate product identity and stock.

Authored product records

AI extraction, reviewed before posting

Fireworks or OpenAI reads a document and proposes structured fields.

Proposed goods receipt

PAR-500-100 / PCR-261001

40 boxes

Original source stays inspectable

400 → 440

boxes on hand

Only explicit approval posts the receipt.

Keys stay on the server. Guided examples keep the review flow available without an API key.

One recall, accounted for

1,000 boxes received

600 boxes historically dispatched

Recorded measure	Before returns	Partial returns	All returned
Returned by recipients	0	100	600
Current stock on hand	400	500	1,000
Outstanding shipment accounting	600	500	0

1,000 boxes recorded in quarantine

Returns are already part of stock. Disposition remains a separate decision.

Evidence behind each decision

- **Source document**
Original file and source text
- **Review decision**
Corrections, actor and reason
- **Movement ledger**
Exact product, batch and units
- **Fixed snapshot**
Captured quantities and history

143

automated tests passed

Product-specific identity
Stock and return conservation
Duplicate and stale-write protection
Immutable report history

Software checks use authored records and controlled provider responses.

A focused distributor business

Operations and quality teams

Document-to-recall accounting with an inspectable source behind each decision.

Proposed commercial model

Organisation subscription, warehouse allowances and optional metered extraction.

Commercial hypothesis

RecallScope

An established category

Alternative	Documented focus
TraceLink	Targeted recalls
SAP ATTP	Serialization and integration
Odoo Inventory	Lots, expiry and FEFO

RecallScope focuses the experience on reviewed documents and return accounting.

Built with agentic AI

Codex agents designed and implemented the custom system under the owner's direction.

Product and market research

Architecture, interface and backend

Tests and deployment

Pitch and demonstration materials
